innovation

THE DISTRACTERS

Novelty Develter - September 2023

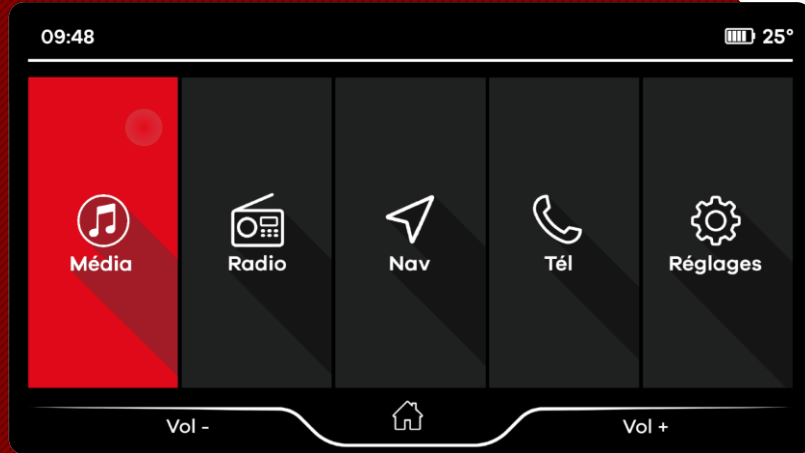

PRESENTATION

Our driving simulators are equipped with a 13" touch screen on the dashboard.

The developed application makes it possible to demonstrate risk taking when the driver is no longer 100% attentive on the road.

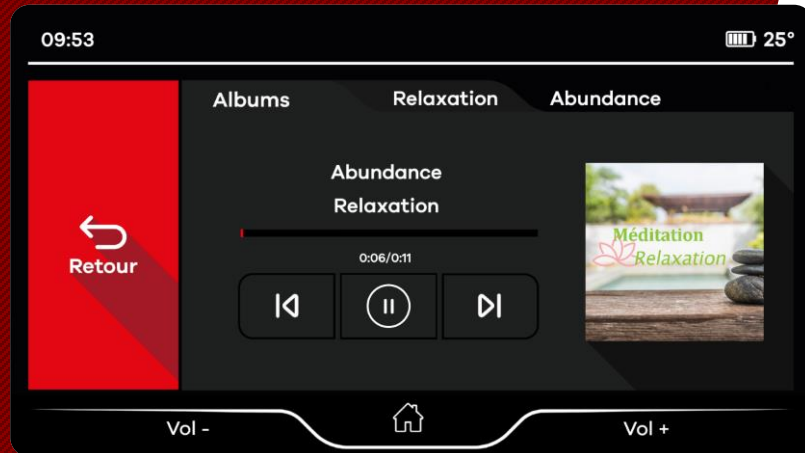

- Media
- Radio
- Navigation
- Phone
- Setting

MEDIA/RADIO

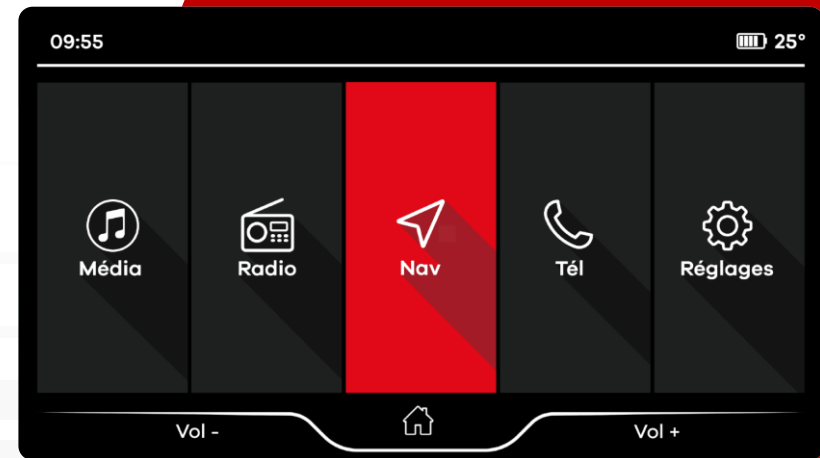

- Use as basic as putting on music or selecting your favorite radio may seem like a simple and mundane gesture while driving, thanks to the simulation, **you will be able to precisely measure inattention while driving and the effects on maintaining the trajectory.**
- Thanks to the VCR function and the webcam, you will provide irrefutable proof of loss of attention to the road. The aim is not to prohibit the use of this accessory but to do so wisely **by always giving priority to the road and risky situations.**

NAVIGATION

- In just a few years, GPS has become an accessory that is so useful and essential in everyday life, **but if used incorrectly it can be a source of risks.**
- The simulator makes it possible to measure where, when, how long the driver consults the screen to navigate, and does he do so at the right time? Here again, **the video recorder/webcam combination** will make it possible to analyze the driver's behavior and provide **proof through images.**

You will get the message across without possible dispute.

PHONE

Thanks to the “Tel” tab you can:

- Call a contact
- Answer a call
- Dial a phone number
- Hang up

These simulations will demonstrate, even to those who are certain of mastering driving and using the phone, **that it is not possible to maintain a sufficient level of safety.**

You will be able to carry out exercises on the simulator where you will measure the driver's reaction times as well as the position of his gaze, the maintenance of the trajectory, ...

Develter offers to combine the webcam and eye tracking, you will then be able to show the driver the precise place where he is looking and you will have a **complete assessment of his performance** or more precisely of the risk-taking during this phase of driving.

« SETTINGS

The touch screen will also be useful to make using the driving simulator even easier on a daily basis.
